TechBridge Sol

IT Operations and SOPs

Effective Date: January 2026
Applies To: All Employees, Contractors, and Temporary Staff

1. Purpose

The purpose of this IT Operations and SOP Policy is to define standard procedures and responsibilities for managing TechBridge Sol's IT infrastructure, systems, and services. This policy ensures operational efficiency, system reliability, security, and compliance while providing clear guidance to IT personnel and end-users.

2. Scope

This policy applies to:

- All IT systems, servers, networks, and cloud resources
- Company-provided hardware, software, and devices
- IT personnel responsible for maintenance, monitoring, and support
- Employees, contractors, and third parties accessing IT services

All IT operations must comply with this policy, IT security policies, and applicable legal or regulatory requirements.

3. IT Governance and Roles

Key roles and responsibilities include:

- **Chief Information Officer (CIO):** Oversees IT strategy, policies, and compliance
- **IT Operations Manager:** Manages daily IT operations, system uptime, and maintenance
- **System Administrators:** Administer servers, network devices, and user accounts
- **Helpdesk Support:** Provides technical support, troubleshooting, and incident reporting
- **End Users:** Follow SOPs, report issues, and comply with IT policies

Clear accountability ensures operational efficiency and minimizes downtime or security risks.

4. System Maintenance and Monitoring

Regular maintenance and monitoring are required to ensure reliable IT operations:

- Servers, network devices, and endpoints are monitored 24/7
- Software updates, patches, and security fixes are applied according to schedule
- Backup systems are maintained and tested regularly
- Performance metrics and logs are reviewed to prevent disruptions

Critical systems have redundancy and failover procedures to maintain availability.

5. Incident Management

All IT incidents must follow a standard reporting and resolution process:

1. **Identification:** Employees report issues via Helpdesk or ticketing system
2. **Classification:** IT assigns priority based on impact and urgency
3. **Resolution:** IT resolves issues according to SOPs and documents steps

4. **Escalation:** High-impact or unresolved incidents are escalated to IT management
5. **Closure:** Completed incidents are logged, reviewed, and communicated

Incident records are maintained for audit and continuous improvement purposes.

6. Change Management

All significant changes to IT systems must follow a structured change management process:

- Submit change requests with details, impact analysis, and rollback plans
- Review and approval by IT Operations Manager or Change Advisory Board
- Scheduled implementation with minimal disruption to users
- Post-implementation testing and documentation

Unapproved changes are prohibited and may result in disciplinary action.

7. Backup and Recovery Procedures

Data integrity and availability are maintained through defined backup and recovery procedures:

- Regular backups of critical systems, databases, and applications
- Offsite or cloud storage of backup copies
- Periodic testing of recovery procedures to ensure reliability
- Documentation of backup schedules and retention policies

Recovery procedures are reviewed and updated annually or as needed.

8. Access Management

Access to IT systems follows the principle of least privilege:

- User accounts are assigned based on role requirements
- Permissions are reviewed periodically

- Terminated employees or contractors have access revoked immediately
- Multi-factor authentication is enabled for sensitive systems

All access requests and changes are logged and auditable.

9. Documentation and SOP Maintenance

IT SOPs must be documented and maintained to ensure consistency:

- Procedures for system setup, troubleshooting, and maintenance
- Step-by-step instructions for standard tasks
- Clear escalation paths for incidents or operational issues
- Regular reviews and updates to reflect system changes or best practices

Employees and IT staff are expected to follow documented SOPs rigorously.

10. Compliance and Audits

IT operations comply with internal policies, industry standards, and legal requirements. Periodic audits are conducted to:

- Verify adherence to security policies and SOPs
- Identify risks or gaps in operations
- Ensure data protection and regulatory compliance
- Implement corrective measures as needed

Non-compliance is addressed through corrective action plans.

11. Policy Review and Updates

This IT Operations and SOP Policy will be reviewed annually or whenever significant changes in technology, infrastructure, or business requirements occur. Employees and IT staff will be notified of updates and expected to comply with the latest version.
