TechBridge Sol

IT Security Policy

Effective Date: January 2026
Applies To: All Employees, Contractors, and Temporary Staff

1. Purpose

The purpose of this IT Security Policy is to establish a framework for protecting TechBridge Sol's digital assets, information systems, and sensitive data. This policy ensures the confidentiality, integrity, and availability of company and client information while supporting secure operations across global teams.

All employees, contractors, and temporary staff are required to comply with this policy. Non-compliance may result in corrective action, up to and including termination.

2. Scope

This policy applies to:

- All company-owned or managed IT systems, devices, and networks
- Employees, contractors, and temporary staff accessing company systems
- Third-party vendors and partners with authorized access to company information

The policy covers all forms of data, including digital, electronic, and cloud-based information.

3. Information Classification

All company information must be classified according to its sensitivity and handled appropriately:

1. **Confidential:** Highly sensitive data (e.g., client data, intellectual property, financial records).
2. **Internal Use Only:** Company operational information not intended for public disclosure.
3. **Public:** Information approved for public release.

Employees must follow handling, storage, and transmission procedures based on the classification level.

4. Access Control

Access to systems and data is granted on a **need-to-know basis**. Employees must:

- Use unique user accounts and strong passwords
- Enable multi-factor authentication where required
- Not share credentials or access tokens
- Immediately report lost or compromised credentials

Access privileges are reviewed periodically and revoked upon role changes or termination.

5. Device and Endpoint Security

All company-provided devices must be:

- Configured with approved security software
- Regularly updated and patched
- Protected with encryption and screen locks

Personal devices used for company work must meet minimum security requirements and be approved by IT.

6. Network Security

Employees must:

- Connect to company networks only via approved methods (e.g., VPN)
- Avoid using public Wi-Fi for sensitive business operations unless secured
- Not attempt to bypass firewalls, antivirus, or other security measures

All network activity may be monitored to ensure compliance with security standards.

7. Data Protection and Privacy

Employees must protect sensitive data according to applicable laws and company policies:

- Store sensitive data in approved repositories
- Encrypt data during transmission and storage
- Do not transmit confidential information via unsecure channels
- Follow retention and disposal policies for sensitive information

Compliance with GDPR, CCPA, and other regional regulations is mandatory where applicable.

8. Incident Reporting and Response

All employees are responsible for reporting actual or suspected security incidents immediately to the IT Security team. Incidents include:

- Unauthorized access or data breaches
- Lost or stolen devices
- Malware infections or suspicious emails
- Policy violations or attempted security circumvention

The IT Security team will investigate, mitigate, and document all incidents following the company's incident response procedures.

9. Software and Application Use

Employees must use only approved software and applications for work purposes. Key requirements include:

- Installation of company-approved software only
- Avoid downloading unlicensed or pirated software
- Follow guidelines for cloud applications and SaaS platforms
- Ensure third-party applications meet security standards

Unauthorized software use may result in disciplinary action.

10. Remote Work and BYOD Security

Employees working remotely or using personal devices must adhere to security standards:

- Devices must be updated and secured according to IT guidelines
- Connections must use VPN or other secure channels
- Confidential information must not be stored on personal devices unless authorized
- Follow all remote access policies and reporting procedures

11. Employee Responsibilities

Every employee is expected to:

- Maintain awareness of IT security policies
- Complete required security training and certifications
- Report suspicious activities, phishing attempts, or security gaps
- Cooperate with audits and compliance checks

Security is a shared responsibility; employees are the first line of defense.

12. Policy Review and Updates

TechBridge Sol will review this IT Security Policy annually or as needed based on evolving threats, technology, or regulations. Employees will be notified of updates and are expected to comply with the most current version.
