TechBridge Sol

Business Continuity and Disaster Recovery Policy

Effective Date: January 2026
Applies To: All Operations, IT, and Engineering Staff

1. Purpose

The purpose of this Business Continuity and Disaster Recovery (BC/DR) Policy is to ensure that TechBridge Sol can **maintain operations and recover critical systems quickly** in the event of an outage, disaster, or unexpected disruption. This policy establishes procedures, responsibilities, and objectives to minimize downtime and data loss.

2. Scope

This policy applies to:

- All production systems, databases, and applications
- Cloud infrastructure, networking, and storage resources
- On-premise servers and critical endpoints
- Backup systems and recovery tools
- Key operational workflows and business-critical processes

All employees involved in operations, IT, or engineering must comply with this policy.

3. Business Continuity Objectives

- Ensure **continuous availability** of critical systems and services
- Minimize disruption to business operations and client services
- Define clear roles and responsibilities for disaster response
- Establish **Recovery Time Objectives (RTO)** and **Recovery Point Objectives (RPO)** for each system

4. Disaster Recovery Procedures

4.1 Backup Strategy

- Critical data must be backed up daily
- Backups stored in **secure offsite or cloud locations**
- Backup integrity tested periodically
- Versioned backups maintained for historical recovery

4.2 Recovery Procedures

- Define step-by-step recovery processes for all critical systems
- Prioritize recovery based on business impact
- Test recovery procedures **at least twice annually**
- Maintain documented rollback procedures for failed recovery attempts

4.3 Communication Plan

- Notify stakeholders immediately upon disaster detection
- Designate a **Disaster Recovery Coordinator** for each major system
- Maintain clear channels for internal and external communication

4.4 Roles and Responsibilities

- **IT Operations Manager:** Oversees recovery, coordinates teams
- **System Administrators:** Execute recovery steps, validate systems
- **Business Unit Leads:** Communicate operational needs, support continuity
- **All Staff:** Follow instructions and report system status promptly

5. Disaster Classification and Escalation

Disasters are classified by impact:

- **Level 1 (Critical):** Entire system or production environment unavailable
- **Level 2 (High):** Significant component failure affecting key workflows
- **Level 3 (Medium):** Localized issue affecting non-critical systems

Escalation paths are predefined and documented for each level, ensuring rapid response and accountability.

6. Testing and Review

- Conduct **scheduled disaster recovery drills** to simulate failures
- Review and update recovery procedures based on drill outcomes
- Maintain logs of testing, recovery times, and issues for audit purposes
- Annual review of BC/DR policy to reflect infrastructure, application, and business changes

7. Compliance and Policy Enforcement

- Non-compliance may result in failed recovery, operational downtime, or data loss
- Staff must report deviations or incidents immediately
- BC/DR plans are aligned with industry best practices and regulatory requirements

8. Policy Review and Updates

This policy will be reviewed at least **annually** or after significant system, process, or personnel changes. All employees involved in operations, IT, or engineering are expected to comply with the latest version.
