TechBridge Sol

Operational Metrics and Reporting Policy

Effective Date: January 2026
Applies To: All Operations, IT, and Engineering Staff

1. Purpose

The purpose of this Operational Metrics and Reporting Policy is to establish standards for **collecting, analyzing, and reporting operational data**. This ensures TechBridge Sol maintains **transparency, accountability, and continuous improvement** across IT, engineering, and business operations.

2. Scope

This policy applies to:

- All production and staging systems
- Cloud infrastructure, servers, and network resources
- Software applications, APIs, and integrations
- Operations teams responsible for monitoring, reporting, and analytics

All staff involved in operational reporting and monitoring must comply with this policy.

3. Key Metrics

Operations teams are responsible for monitoring and reporting the following key performance indicators (KPIs):

- **System Availability:** Uptime percentage of critical applications and services
- **Performance Metrics:** Response times, latency, throughput
- **Error Rates:** Number of application errors, failed jobs, or exceptions
- **Security Metrics:** Security alerts, incidents, vulnerabilities identified
- **Incident Resolution:** Time to detect, respond, and resolve incidents
- **Change Success Rate:** Percentage of successful deployments versus failed deployments

4. Data Collection and Monitoring

- Use approved monitoring tools for logging and metric collection
- Collect metrics **continuously** in real time where feasible
- Store data securely and maintain integrity for historical analysis
- Ensure monitoring covers all critical systems and business processes

5. Reporting Frequency and Format

- **Daily Reports:** System health, uptime, and critical incidents
- **Weekly Reports:** Summary of operational performance, minor incidents, and trends
- **Monthly Reports:** KPI analysis, SLA compliance, root cause analysis for major incidents
- Reports must be **documented, version-controlled, and shared** with relevant stakeholders

6. Incident and Exception Reporting

- All operational incidents must be logged in the incident management system
- Include severity, impact, responsible personnel, and resolution steps
- Escalate critical issues immediately to the Operations Manager or senior leadership
- Post-incident reviews must feed back into metrics and reporting to track improvements

7. Roles and Responsibilities

- **Operations Team:** Collect and validate metrics, generate reports, escalate anomalies
- **IT/DevOps:** Provide system-level data and assist in troubleshooting
- **Engineering Team:** Support root cause analysis for production incidents
- **Management:** Review reports, ensure accountability, and make decisions based on insights

8. Data Quality and Compliance

- Metrics must be accurate, timely, and consistent
- Ensure **confidentiality** and integrity of operational data
- Comply with company policies, regulatory requirements, and internal audit standards
- Any data anomalies or discrepancies must be investigated promptly

9. Continuous Improvement

- Use metrics to identify trends, bottlenecks, and opportunities for optimization
- Review KPIs periodically and update reporting standards as needed
- Conduct quarterly reviews of operational reporting effectiveness
- Document improvements and lessons learned for knowledge sharing

10. Policy Review and Updates

This Operational Metrics and Reporting Policy will be reviewed at least annually or whenever significant infrastructure, process, or business changes occur. All staff must comply with the latest version.
